

Humanity Ahead

BVG AGROTECH PRIVATE LIMITED

Enhances Organic Carbon in the Soil

**Dose
1 ltr per acre**

Available packings : 1 Ltr & 5 Ltr.

BVG CARBON PLUS

BVG Carbon Plus is made from coal naturally occurring in the mine. Carbon Plus contains Plant Bio Stimulant therefore crops tolerate stress. Increases the nutrient absorption of crop. The special thing is that the organic carbon in the soil grows naturally. At the same time, the function of the roots is improved and the branches and leaves grow a lot.

Carbon plus contains Humic acid and fulvic acid. Humic acid and fulvic acid promote quality growth of plants. At the same time the fertility of the soil is maintained.

Features

- Alkaline or barren soils become fertile.
- Increases the amount of organic carbon in the soil.
- Increases soil Water Holding Capacity.
- Photosynthesis is accelerated.
- Improves availability of phosphorus in the soil to the crop.
- Crops in saline and loamy soils have to suffer for water absorption. The use of Carbon Plus balances the pressure between salts, water and nutrients. As a result the Water Absorption Capacity of the crop increases.
- Increases plant cell division and growth rate. This increases the production of agricultural crops. Increases the activity of stimulants in crops. This produces more food.
- The number of positively charged nutrients on the soil particles increases due to the cation exchange capacity.

Dosage

- Use 10 liters per acre for perennial crops at the rate of 1 liter per month.
- Use 5 liters per acre for seasonal crops at the rate of 1.5 liters per month.

How to Use

- Carbon Plus can be used for all types of crops through Drenching , Drip and Flood irrigation.
